

## CS 120 Assignment 4

**Date assigned: 11/15/06**

**Date due: 11/30/06**

**Points: 100**

You have been hired by a company called **Tour The World** whose sole job is to help people look at places around the world for vacationing. Tour The World makes money through advertising and gets a small percentage of money from each person that books a tour through the Web site.

As a consultant, your job is to develop a professional Web site that promotes tourism to any location in the world. Obviously, the better the Web site, the more money you have the possibility of earning.

Minimum requirements include:

1. A Web site with a minimum of four different Web pages (including the form) that you design yourself using Dreamweaver. One of the pages needs to use a clickable image map with a minimum of 5 hot spots. The hot spots are to be easily identifiable on the image map.
2. Easy (consistent) navigation between ALL pages of the site.
3. Professional appearance and uniform look for each page throughout the entire site.
4. A form providing additional information to be used to help with the trip planning to include (but not limited to):
  - First Name
  - Last Name
  - Street Address
  - City
  - State
  - Zip
  - Email Address
  - Number of children
  - Number of nights
  - Activities
  - Comments

The form needs to use a text field, text area, check boxes, radio buttons (or List/Menu). The form is to contain a Submit button that sends the information to the Web server where the script <http://zeus.cs.pacificu.edu/cgi-bin/process.pl> provides the action for the form. Also, include a Reset button to clear out the form contents.

5. Make the First Name, Last Name, and Email Address fields mandatory using Dreamweaver Javascript.

Grading will be based on the following:

1. Professional appearance of the entire site
2. Information content of each Web page (make sure there are no typos and use proper grammar)
3. Design and navigation between the Web pages
4. Creativity
5. Completing the minimum requirements completely and correctly

Note1: For this assignment, I will access the page from your sites folder as follows: <http://euler.math.pacificu.edu/~login/tourtheworld.html>.

Note2: Remember, make sure that each graphic is sited. Use the following citation method for each graphic that is used in your Web page.

Source: [Pacific University](#)

The link must link back to a page that contains the graphic.

This must be done for EACH graphic used.
