

Future Jobs, Artificial Intelligence, Automation

General:

What are computers good at?

What are people good at?

What does *Artificial Intelligence* mean?

Find some examples of real world usages.

Are these replacing people or solving new problems?

Why is AI taking off now and being so successful?

Why is there so much anxiety over AI?

What jobs have we seen lost to AI?

Yang, NYTimes: The Robots Are Coming

Self Driving Cars

How many truck drivers are in the US?

What is the current job outlook?

What other jobs are affected when shipping increases?

"lump of labor" fallacy. What is this?

Economist: Automation and Anxiety

"Automating a particular task, so that it can be done more quickly or cheaply, increases the demand for human workers to do the other tasks around it that have not been automated. "

What is your job goal? Or a typical job someone with your major may take?

How easy is it to automate that job?

What parts are easy to automate?

What parts are not easy to automate?

How might automation in your field increase demand for other tasks?

Wired: Robocalypse Not

Alternate explanation:

Two Futures:

1. Robots are coming with superior productivity and economic growth.
2. Economic stagnation is coming with no economic growth.
