CS 150 Lab 01 Introduction to Visual Studio

The purpose of today's lab session is to familiarize you with

- 1. Connecting to the Computer Science server 'grace' which you will use to turn in your solution to a given program assignment / lab assignment
- 2. Visual Studio 2017 Enterprise
- 3. Building and Running a Program

► If you have trouble with any piece of this, please ask the instructor for help.

► Connect to the Computer Science server grace.cs.pacificu.edu

1. Either right-click on the Windows icon in the lower-left portion of your screen, then select **File Explorer**

OR click on the folder icon on the taskbar (the exact position of this folder on your taskbar may be different):

2. In the left-hand pane in the window that opens, right-click on **This PC** and select **Map network** drive.

NOTE: If the **This PC** icon is available on the desktop, you can right-click on it and select Map network drive from the resulting menu directly.

3. Type in \\grace.cs.pacificu.edu\students in the Folder textbox. Do not worry about what Drive letter is showing. Could be W: or Z: or anything else. Notice the slashes are \ not /. Also, make sure the Connect using different credentials box is checked and click on Finish:

			\times				
~	🍕 Map Ne	twork Drive					
	What network folder would you like to map?						
	Specify the drive letter for the connection and the folder that you want to connect to:						
	Drive:	Z: ~					
	Folder:	\\grace.cs.pacificu.edu\students ~ Browse					
		Example: \\server\share					
		Reconnect at sign-in					
		Connect using different credentials					
		Connect to a Web site that you can use to store your documents and pictures.					
		Finish Cance	el				

- 4. When you are prompted for a user name and password, type in **eniac\yourloginname** where yourloginname is your PUNetID and the password is your **grace password**.
- 5. If all goes well, you will see something like the following:

🛃 📙 🖛		Drive Tools	students (\\grace.cs.pacificu.edu) (Z:)
ile Home	Share	View Manage	
→ × ↑ ਵ	→ Thi	s PC > students (\\grace	.cs.pacificu.edu) (Z:)

- 6. Inside of CS150-01Accts you will find your individual folder to be used for saving your projects. No other student has access to this folder, but faculty members do. Do not store any illegal material on grace.
- 7. We will come back to grace later in the lab.

► Introduction to Visual Studio 2017 Enterprise

- 1. Log on to the computer if you have not already done so using your Pacific (not grace) login credentials.
- Start Visual Studio 2017 Enterprise by using the Windows icon to navigate to Visual Studio 2017
- 3. We are going to go through creating a solution PUNetIDLabs and your first project 01_1_HelloWorld. Create a new project by going to File → New → Project. Select (Visual C++) from the left window, and (Win32 Console Application from the main window. For Name: use 01_1_HelloWorld and for Solution name: use PUNetIDLabs where PUNetID is your PUNetID. As an example, for a PUNet of lanec, the window below would look like the following:

New Project					? ×
▷ Recent		.NET F	amework 4.5.2	• # E	Search Installed Templates (Ctrl+E)
▲ Installed			Win32 Console Application	Visual C++	Type: Visual C++
▲ Templates ▷ Visual C# ▷ Visual Basic			MFC Application	Visual C++	A project for creating a Win32 console application
Visual F# ▷ Visual C++		5	Win32 Project	Visual C++	
SQL Server ▷ JavaScript		N.	Empty Project	Visual C++	
▷ Python ▷ TypeScript		5	Makefile Project	Visual C++	
Game Build Accelerator ▷ Other Project Types Modeling Projects Samples					
▷ Online			<u>Click here to go online and find templates</u>	<u>i.</u>	
Name:	01_1_HelloWorld				
Location:	c:\users\chris\do	cuments	\visual studio 2015\Projects	•	Browse
Solution name:	lanecLabs				 Create directory for solution Add to Source Control
					OK Cancel

4. Once the Name, Location, and Solution name are correct AND Win32 Console Application is selected, you can click OK, which takes you to the following screen. Make sure the Application type is **Console application**.

Win32 Application Wizard - 01_1_HelloWorld ?				
Welco	ome to the Win32 Application Wizard			
Overview Application Settings	These are the current project settings: • Console application Click Finish from any window to accept the current settings. After you create the project, see the project's readme.txt file for information about the project features and files that are generated.			
	< Previous Next > Finish Cancel			

5. Clicking Next results in the following: You are to uncheck Precompiled header and check Empty Project **<u>BEFORE</u>** clicking Finish as shown below.

Win32 Application Wizard - 01_1_HelloWorld				\times
Applicat	ion Settings			
Overview	Application type:	Add common header files for:		
Application Settings	 Windows application Console application DLL Static library Additional options: Empty project Export symbols Precompiled header Segurity Development Lifecycle (SDL) checks 	ATL		
	< Previous	Next > Finish	Cance	el

Now you can click Finish!!!!!!!

6. Once you have completed step 6, stop and ask the instructor or TA to review your work.

7. Add a New Item to the Project. Right click on the folder Source Files \rightarrow Add \rightarrow New Item.... You will see the window below. Select C++ File (.cpp) and name it **main.cpp**.

Add New Item - 01_1_	HelloWorld				? ×
▲ Installed		Sort by: Default		Search Installed Templates (Ctrl+	E) 🔑 🕶
✓ Visual C++ Code Data Resource Web Utility Property Sheet: HLSL Graphics	s	C++ File (.cpp)	Visual C++ Visual C++	Type: Visual C++ Creates a file containing C++ s	ource code
P Online		<u>Click here to go online ar</u>	nd find templates,		
Name:	main.cpp				
Location:		ocuments\visual studio 2015\Projects\lanecLabs\	\01_1_HelloWorld\ •	Browse Add	Cancel

- 8. Turn on line numbers and setup the tab size to tab 2:
 - 1. Show Line Numbers
 - Tools→Options→Text Editor→All Languages→General
 - Check Line numbers
 - 2. Set Tab Size
 - Tools→Options→Text Editor→All Languages→Tabs
 - 1. Tab Size: 2
 - 2. Indent Size: 2
 - 3. Check Keep Tabs then click OK.
- 9. Type in the following program to **main.cpp**. Be sure to copy the program <u>exactly</u> as shown below the longest lines should be 80 characters long). Use your name as the Author and use today's date and change the class to your appropriate section of CS 150 (eg. CS 150-01).

10. Once you have completed step 9, stop and ask the instructor or TA to review your work.

► Let's examine the program you just wrote.

- 1. Lines 1-8 are comments. Note that comments are used to explain to the human reader what this program does. Visual Studio's compiler ignores comment lines. Note that comments are green.
- 2. Line 10 includes the **iostream** (input/output stream) library required to display messages to the screen. The iostream library is also required when reading input from the user.
- 3. Line 12 specifies the **namespace**, which is required for using **cout** to display messages to the screen. More on this later.
- 4. Line 14 declares the **main** function required by every C++ program. The main function is where every C++ program starts when you begin program execution.
- 5. Line 15 and 19 contain { and }, respectively. These mark the beginning and ending of ALL lines that are included in the main function.
- 6. Line 16 displays a message on the screen.
- 7. Line 18 ends the program where EXIT_SUCCESS denotes that no runtime errors were encountered.

• Building the Program

Before you can run your program, you will need to build the program which checks your program for syntax errors. A program that builds with no syntax errors causes your C++ code to be translated into machine code (zeros and ones) that is understood by the computer.

- 1. You are ready to build and run your first C++ Program! Make sure you've saved your work using **File** | **Save All** or the blue disk icon on the tool bar.
- 2. Build your program using the **Build** menu and the **Build Solution** option or press the Ctrl and F7 keys simultaneously. Building the program checks for syntax errors.

The program will then compile and link. The output window below the source window will display messages indicating what is going on. You can expand this window or scroll through so that you are able to read all the messages.

If you have typed everything correctly, the window will display Build: 1 succeeded. If you do get errors, then check your code and make sure you've typed everything correctly. Let me know if you can't get things to work.

• Run the Program

- 1. Run your program by using the **Debug** menu and the **Start Without Debugging** option or by pressing the Ctrl and F5 keys simultaneously.
- 2. A black window should appear.

3. Which lines in your program do you think produces each line in the black output window? Answer_____

4. What happens after you press enter? Answer _____

5. Once you have completed step 4, stop and ask the instructor or TA to review your work.

Congratulations! You have run your first C++ program.

What happens if we type **cot** instead of **cout**? Try it now, and build and run your program again.

Answer _____

What happens if we delete (<< endl) from line 16? Try it now, and build and run your program again.

Answer

► Once you have completed all of the above, then create a new project in your solution PUNetIDLabs. You do this by going to File->Add->New Project . . Name this project 01_2_PayCalculator. Make sure that the project is a Win32 Console Application and that (Empty project) is checked.

Once the project has been created, right-click on the project name in the solution window and select **Set** as **StartUp Project.**

Add a file named main.cpp to the newly created project and type in the following code, again changing the Author and the Class.

Build and run your program.

Write a brief description of what the program does.

A.

Show your completed work to the TA or the professor.

Save the project to your folder on grace and then place a copy of your project in the CS150-01 Drop folder!

- Copy your solution PUNetIDLabs from Computer->Local Disk (C:)->Users->PUNetID->My Documents->Visual Studio 2017->Projects into your individual folder in the CS150-01Accts folder on grace.
- **9.** Copy your solution PUNetIDLabs into the CS150-01 Drop folder. **This is how you will submit your programming assignments in this course.**
- 10. Once you have copied both projects to the proper location, stop and show your instructor or TA.

- ► After each lab session, be sure to copy your work to your folder on grace.
- ► As you work on your programming assignments, be sure to copy your work to your folder on grace.

Why is it so important to copy your work to grace?					

► Optional Challenge (you do not need to submit this to CS150-01 Drop)

Once you have followed all of the above instructions and submitted your lab project, modify your pay calculator so that it displays a message asking for a name. Once the user types in the name, the program should display "Hello" followed by the name typed in by the user and then continue on with its previous work. **HINT**: Look at the program at the end of the handout for Monday's Lecture.

The updated input and output of the pay calculator should be as follows:

What is your name? Bob Hello Bob! How many hours did you work? 10
