

CS 150 Lab 13

Character Processing & Writing to Files

The objective of today's lab is to some basic character processing while reading from and writing to files.

- Be sure your output looks exactly like the specified output.
- Be sure to submit the completed project to CS150-02 Lab by Friday at 5pm.
- Be sure to follow the coding standards and add comments to your code!

Lab 13

You are to grab the files **characterprocessing.cpp** and **message.txt** in the public folder on Grace. In a project called **13_1_CharacterProcessing**, write the code for each of the TODOs right under the TODO comment. Make sure to show the instructor or tutor your completed code where it says to do so.

1) Your program is to compile without any errors or warnings.

2) Do not use any magic constants in your program. Define your constants before defining the rest of your program's variables.

Once your project is complete, place your solution PUNetIDLabsSecond into the CS150-02 Drop folder on Grace. Your solution is to have ALL previous projects from lab 8 on completely working and correct.
