CS 150 Lab #1 Introduction to Visual Studio

The purpose of today's lab session is to familiarize you with

- 1. Visual Studio Pro 2010
- 2. Building and Running a Program
- 3. Connecting to the Computer Science server 'Turing' which you will use to turn in your solution to a given program assignment / lab assignment

► If you have trouble with any piece of this, please ask the instructor for help.

► Introduction to Visual Studio 2010

- 1. Log on to the computer if you have not already.
- 2. Start Visual Studio 2010 by using the Start button to navigate to Programs and then Microsoft Visual Studio 2010
- 3. We are going to go through creating a solution **PUNetIDLabs** and your first project 01_1_HelloWorld. Create a new project by going to File → New → Project. For **Name:** use 01_1_HelloWorld and for **Solution name:** use PUNetIDLabs (your PUNetID). As an example, for a PUNet of ryandj, the window below would look like the following:

4. Once the Name, Location, Solution name are correct AND Win32 Console Application is selected, you can click OK, which takes you to the following screen. Make sure the Application type is Console application.

5. The following window will be displayed. You need to see **Console application**.

| Win32 Application Wizard - 01_1_HelloWorld | | | | | | |
|--|--|--|--|--|--|--|
| Welcome to the Win32 Application Wizard | | | | | | |
| Overview Application Settings | These are the current project settings: • Console application Click Finish from any window to accept the current settings. After you create the project, see the project's readme.txt file for information about the project features and files that are generated. | | | | | |
| | <pre>< Previous Next > Finish Cancel</pre> | | | | | |

6. Clicking Next results in the following: You are to uncheck Precompiled header and check Empty Project **<u>BEFORE</u>** clicking Finish as shown below.

| Win32 Application Wizard - 01_1_ | HelloWorld | ? × |
|----------------------------------|---|--|
| C:> | on Settings | |
| Overview Application Settings | Application type: <u>W</u>indows application Console application DLL Static library Additional options: <u>Empty protects</u> Export symbols Precompiled header | Add common header files for: ATL MFC |

Now you can click Finish!!!!!!!

- 7. Once you have completed step 6, stop and ask the instructor or TA to review your work.
- There is a Visual Studio FAQ on the CS 150 website at http://zeus.cs.pacificu.edu/chadd/VS_FAQ.html. Go to the section that says "Add a New Item to the Project" and "Add a C++ File to the Project" to create a file called main.cpp.
- 9. Type in the following program to **main.cpp**. Be sure to copy the program <u>exactly</u> as shown below. Use your name as the Author and use today's date.

- 10. Turn on line numbers and setup the tab size to tab 2, as explained in the Visual Studio FAQ.
- 11. Once you have completed step 9, stop and ask the instructor or TA to review your work.

► Let's examine the program you just wrote.

- 1. Lines 1-9 are comments. Note that comments are used to explain to the human reader what this program does. Visual Studio's compiler ignores comment lines. Note that comments are green.
- 2. Line 11 includes the **iostream** (input/output stream) library required to display messages to the screen. The iostream library is also required when reading input from the user.
- 3. Line 13 specifies the **namespace**, which is required for using **cout** to display messages to the screen. More on this later.
- 4. Line 15 declares the **main** function required by every C++ program. The main function is where every C++ program starts when you begin program execution.
- 5. Line 16 and 19 contain { and }, respectively. These mark the beginning and ending of ALL lines that are included in the main function.
- 6. Line 17 displays a message on the screen.
- 7. Line 18 ends the program where EXIT_SUCCESS denotes that no runtime errors were

encountered.

• Building the Program

Before you can run your program, you will need to build the program which checks your program for syntax errors. A program that builds with no syntax errors causes your C++ code to be translated into machine code (zeros and ones) that is understood by the computer.

- 1. You are ready to build and run your first C++ Program! Make sure you've saved your work using **File** | **Save All** or the blue disk icon on the tool bar.
- 2. Build your program using the **Build** menu and the **Build Solution** option. Or press the F7 key. Building the program checks for syntax errors. The program will then compile and link. The output window below the source window will display messages indicating what is going on. You can expand this window or scroll through so that you are able to read all the messages.

If you have typed everything correctly you will have 0 errors and 0 warnings. If you do get errors, then check your code and make sure you've typed everything correctly. Let me know if you can't get things to work.

Run the Program

- 1. Run your program by using the **Debug** menu and the **Start Without Debugging** option.
- 2. A black window should appear.

3. Which lines in your program do you think produces each line in the black output window? Answer_____

4. What happens after you press enter? Answer _____

5. Once you have completed step 4, stop and ask the instructor or TA to review your work.

Congratulations! You have run your first C++ program. What happens if we type **cot** instead of **cout**? Try it now, and build and run your program again. Answer ______

What happens if we delete << endl from line 17? Try it now, and build and run your program again. Answer ______

► Once you have completed all of the above, then create a new project in your solution **PUNetIDLabs**. Name this project **01_2_PayCalculator**.

Add a file named main.cpp to the newly created project and type in the following code.

| 👓 ryandjLabs - Microsoft Visual Studio | 👓 ryandjLabs - Microsoft Visual Studio | | | | | | |
|---|--|--|--|--|--|--|--|
| <u>File Edit View Project Build Debug</u> | Tea <u>m</u> D <u>a</u> ta <u>T</u> ools Te <u>s</u> t <u>W</u> indow <u>H</u> elp | | | | | | |

| | // Calculate the pay. | | | | | | |
| | pay = hours * rate; | | | | | | |
| | | | | | | | |
| | // Display the pay. | | | | | | |
| | <pre>cout << "You have earned \$" << pay << endl; cout << "You have earned \$" << pay << endl;</pre> | | | | | | |
| | <pre>30 return EXIT_SUCCESS; a1 1</pre> | | | | | | |
| | 31 [} | | | | | | |

Build and run your program.

Write a brief description of what the program does.

A. _____

Show your completed work to the TA or the professor.

Save the project to your folder on Turing and then place a copy of your project in the CS150-02 Drop folder!

► Connect to the Computer Science server turing.cs.pacificu.edu

1. Go to Start and right-click on Computer

2.

| Computer | | | | | |
|--|-----------|---------------------------|----------------|--------|--|
| | | Open | | | |
| Control Panel | 0 | Manage | | | |
| Devices and P | | Map network drive | · | | |
| | | Disconnect network drive | | | |
| Default Progra | 3 | Show on Desktop | | | |
| Help and Sup | | Rename | | | |
| | | Properties | | | |
| Select Map net | tworl | c drive | | | |
| | | 4 (mat (2)) | - | × | |
| 🕞 🤏 Map Netwo | ork Drive | | | | |
| What network folder would you like to map? | | | | | |
| Specify the drive letter for the connection and the folder that you want to connect to: | | | | | |
| Drive: | N: | • | | | |
| F <u>o</u> lder: | \\turing | .cs.pacificu.edu\students | <u>B</u> rowse | | |
| Example: \\server\share | | | | | |
| Reconnect at logon | | | | | |
| Connect using different credentials Connect to a Web site that you can use to store your documents and pictures. | | | | | |
| Connect to a web site that you can use to store your documents and pictures. | | | | | |
| | | | | | |
| | | | | | |
| | | | Tinich | Cancal | |
| | | | Finish | Cancel | |

- 3. Type in **turing.cs.pacificu.edu****students** in the Folder textbox. Do not worry about what Drive letter is showing. Could be W: or Z: or anything else. Notice the slashes are \ not /.
- 4. When you are prompted for a name and password, type in **eniac\yourloginname** where yourloginname is your PUNetID and the password is your Turing password.
- 5. If all goes well, you will see folders CS150-02 Drop, CS150-02 Fall2012Accts, and CS150-02 Public. Inside of CS150-02 Fall2012Accts will be your individual folder to be used for saving your projects. No other student has access to this folder, but faculty members do. Do not store any illegal material on Turing.
- 6. Copy your solution PUNetIDLabs from the desktop into your individual folder on Turing.
- 7. Copy your solution PUNetIDLabs from the desktop into the CS150-02 Drop folder. This is how you will submit your programming assignments in this course.
- 8. Once you have copied both projects to the proper location, stop and show your instructor or TA.
- ► After each lab session, be sure to copy your work to your folder on Turing.

► As you work on your programming assignments, be sure to copy your work to your folder on Turing.

Why is it so important to copy your work to Turing?

► Optional Challenge (you do not need to submit this to CS150-02 Drop)

Once you have followed all of the above instructions and submitted your lab project, modify your pay calculator so that it displays a message asking for a name. Once the user types in the name, the program should display "Hello" followed by the name typed in by the user and then continue on with its previous work. **HINT**: Look at the program at the end of the handout for Monday's Lecture.

The updated input and output of the pay calculator should be as follows:

What is your name? Bob Hello Bob! How many hours did you work? 10
