# CS150 Intro to CS I 

## Fall 2014

## Chapter 5 Loops \& Files

- Reading: pp. 262-264 (Section 5.10)
- Good Problems to Work: p. 297 [18]

## Nested Loops

- What is the output?

```
for (int i = 0; i < 3; i++)
    {
        // how many times will this run?
        cout << i << ": ";
        for (int j = 0; j < 2; j++)
        {
            // how many times will this run?
            cout << "*";
        }
        cout << endl;
    }
```

## Practice

- What is the output?

```
for (int i = 1; i < 4; i++)
{
    cout << i << ": ";
```

    for (int j \(=0\); j < i; j++)
    \{
        lout << "*";
    \}
    cout << end;
    \}

## Practice

- Write C++ statements that will read in an integer from the user, $n$, and produce the following output:

1
22
333
4444
nnnnnnnnn

## Practice

- Consider the following program segment:

```
cout << setw(3) << "i" << setw(3) << "j" << endl;
for (int i = 0; i <= 3; i += 2)
    {
        for (int j = i; j <= 3; j++)
        {
                cout << setw(3) << i << setw(3) << j << endl;
            }
    }
```

1. What is the output?
2. Rewrite the above nested loop as a nested while loop.

## Practice

- An input file contains data on a day's sales for a number of stores. The first line of the file contains the number of stores. This is followed by the sales amounts for each store. Write a program to display a bar graph of asterisks comparing each store's sales. Each asterisk represents $\$ 100$ in sales.
- Sample input and output are on the next slide

## Practice

## Input File

| 1 | 5 |
| :--- | :--- |
| 2 | 1000 |
| 3 | 1200 |
| 4 | 1500 |
| 5 | 800 |
| 6 | 1900 |

## Output

```
Cams, C:\Windows\system32\cmd.exe
Store 1: **********
Store 2: *************
Store 3: ***************
Store 4: ********
Store 5: ********************
Press any key to continue . . .
```
