CS360 Final Project
Part 2: Report, Project and Presentation

Date Assigned: Wednesday, April 28, 2004
Date Due: Thursday, May 13, 2004
Total Points: 100

Introduction

The final project for this course will be a group activity. You need to wow me with your creativity, expertise and design.

Part 2

As far as I can tell, you are all making good progress on your projects and I look forward to seeing the final results.

What You Should Submit

- An individual write-up describing your contribution to the project. You should also summarize your group members' contribution to the project. Do you think they did a good job?
- Submit all your files. You should also include a text file detailing the location of the files you have running on the server.
- Your presentation file. The presentations should be about 15 – 20 minutes long, and every group member must present. The presentation should also include a demo. Your presentation should include the following:
    o Introduction: Describe what you set out to do.
    o Components: Describe the different components of your project. Did you use databases, clients, servers and servlets.
    o Each individual should then go into detail about his or her own contribution. What difficulties did you come across? What technologies did you use? What was the hardest part of your project? What was the most fun part of your project?
    o Future work. Describe how, if you had all the time in the world, you would improve your project.
    o Summary. Summarize your project and your experience in the project and give your demo.

Grading

This project will count for 25% of your grade.

The project will be graded as follows:
- 5% for completing the project that you proposed
- 5% will be on each individual write-up
- 75% of the grade will be on the design and implementation of the project
- 15% will be on the presentation
