

Last Time

- ❖ We created our first Java application
- ❖ What are the components of a basic Java application?
- ❖ What GUI component did we use in the examples?
- ❖ How do we write to the standard output?

2/5/04

CS360 Client/Server
Programming Using Java

1

Java Applets

- ❖ An applet is a small Java program that can be embedded into an HTML document
 - Question: What does an html document look like?
- ❖ The Java program is stored on the web server along with the html files, images, etc.
- ❖ How is the Java program executed on the client's machine?

2/5/04

CS360 Client/Server
Programming Using Java

2

Java Applets

- ❖ When the web browser loads the web page, it downloads the applet to the client machine and begins executing it
- ❖ Web browsers are able to run Java applets either by
 - Directly supporting Java (such as Netscape 7)
 - Using the Java Plug-in (such as Microsoft Internet Explorer and Safari)

2/5/04

CS360 Client/Server
Programming Using Java

3

Java Applets

- ❖ Another way to run Java applets is to use the `appletviewer` that is included with the Java SDK
- ❖ The steps for creating and running applets are:
 - Create the Java applet in the text editor and compile it using `javac`
 - Create an html file that includes the Java applet
 - Run the applet by using the `appletviewer`
 - ✓ `appletviewer myhtml.html`

2/5/04

CS360 Client/Server
Programming Using Java

4

Java Applets

- ❖ What are the useful things about Java applets?
- ❖ Can you think of examples of situations where Java applets would be appropriate?

2/5/04

CS360 Client/Server
Programming Using Java

5

First Java Applet

```
import java.awt.Graphics; // import class Graphics
import javax.swing.JApplet; // import class JApplet

public class WelcomeApplet extends JApplet {

    public void paint( Graphics g )
    {
        super.paint( g );

        g.drawString( "Welcome to Java Programming!",
            25, 25 );
    } // end method paint

} // end class WelcomeApplet
```

2/5/04

CS360 Client/Server
Programming Using Java

6

Executing the Applet

- ❖ To execute the applet, we must perform the following steps:
 - Compile the applet in the same way that we did for Java applications
 - ✓ How is that?
 - Create an html document to load and run the applet
 - Load the html file into a browser or using appletviewer

2/5/04

CS360 Client/Server
Programming Using Java

7

HTML

- ❖ The html should contain the command to load the Java applet
 - ```
<applet code="WelcomeApplet.class" width="300" height="45"></applet>
```

2/5/04

CS360 Client/Server  
Programming Using Java

8

## Properties of Applets

- ❖ They do not need a main method.
- ❖ They do however require a paint method
- ❖ To simplify the process of writing Java applets, the applet inherits from the JApplet class.
- ❖ This class contains all the methods needed to create basic applets (over 200 of them!)
- ❖ The inheritance is achieved by using the `extends` keyword

2/5/04

CS360 Client/Server  
Programming Using Java

9

## How Applets Work

- ❖ When the browser or appletviewer begins executing the Java applet, three methods are called in this order:
  - `init`
  - `start`
  - `paint`
- ❖ These three methods are defined in the JApplet superclass and are inherited by the subclass

2/5/04

CS360 Client/Server  
Programming Using Java

10

## Method `paint`

- ❖ In our example, the method `paint` overrides the method defined in the superclass
- ❖ This new method is called instead of the original method
- ❖ Since we want the original `paint` method to be called we need to specify that in the body of our `paint` method
  - `super.paint(g);`

2/5/04

CS360 Client/Server  
Programming Using Java

11

## Method `paint`

- ❖ The next line in method `paint` draws a string to the screen
  - ```
g.drawString("Welcome to Java Programming!", 25, 25);
```

2/5/04

CS360 Client/Server
Programming Using Java

12

Graphics Class

- ❖ A package in Java is just a collection of classes
- ❖ java.awt is an example of a package
- ❖ It's classes include Dialog, Event, Graphics and Image

2/5/04

CS360 Client/Server
Programming Using Java

13

Modifying the Applet

- ❖ Let us practice using some of the other methods in the Graphics class
- ❖ Which method would you like to use?
- ❖ Let us try changing the colour of the text or shapes.
 - How can we find out how to do this?

2/5/04

CS360 Client/Server
Programming Using Java

14

Including Swing Components in Applets

- ❖ What do I mean by Swing components?
- ❖ The graphics class is not powerful enough to create meaningful Java applets
- ❖ It is sometimes necessary to read in data from the users, display data on multiple lines and display several windows
- ❖ How can we combine Swing and applets?

2/5/04

CS360 Client/Server
Programming Using Java

15

Swing and Applets

- ❖ We can use the JOptionPane class in an applet in the same way that we used it in the application
- ❖ Write a Java applet that will ask the user for two numbers and display the sum of these numbers

2/5/04

CS360 Client/Server
Programming Using Java

16

Basic Programming Concepts

- ❖ Selection structures
 - If statement. Same as in C++

```
if(x>0)
    System.out.println("X is positive");
else
    System.out.println("X is negative");
```

2/5/04

CS360 Client/Server
Programming Using Java

17

Conditional Operator (?:)

- ❖ Java's only ternary operator
 - What does ternary mean?
- ❖ Shortcut of the if-else statement

```
System.out.println( studentGrade >= 60? "Passed" : "Failed" );
```

2/5/04

CS360 Client/Server
Programming Using Java

18

More Selection Structures

❖ Selection Structures:

> Switch statements. Same as C++

```
int choice = 3;
switch(choice)
{
    case 1: System.out.println("One");
            break;
    case 2: System.out.println("Two");
            break;
    case 3: System.out.println("Three");
            break;
    default: System.out.println("None");
}

```

2/5/04

CS360 Client/Server
Programming Using Java

19

Repetition Structures

❖ Java supports three loop structures

❖ While loop

```
number = 0;
while( number <= 16 )
    total += number;
```

❖ For loop

```
for( number=0; number<=16; number++ )
    total += number;
```

2/5/04

CS360 Client/Server
Programming Using Java

20

Repetition Structures

❖ Do-while loop

```
number = 0;
do
{
    total += number;
}
while( number <= 16 )

```

2/5/04

CS360 Client/Server
Programming Using Java

21

Primitive Data Types

❖ In other words, simple data types

boolean		true or false
char	16 bits	65536 chars
byte	8 bits	-128 to 127
short	16 bits	-32,768 to 32,767
int	32 bits	-2,147,483,648 to 2,147,483,647
long	64 bits	-2 ⁶³ to 2 ⁶³ -1
float	32 bits	IEEE 754 floating point
double	64 bits	IEEE 754 floating point

2/5/04

CS360 Client/Server
Programming Using Java

22

Break

❖ The `break` statement can be used with `while`, `do-while`, `for` and `switch` statements

❖ `break` causes the immediate exit from any of the above statements

```
for( int i=0; i<10; i++)
{
    if(i == 5)
        break;
    number += i;
}

```

2/5/04

CS360 Client/Server
Programming Using Java

23

Continue

❖ The `continue` statement is used with `while`, `for` or `do-while` loops

❖ It causes the current iteration of the loop to stop and moves on to the next iteration

```
for( int i=0; i<10; i++)
{
    if(i == 5)
        continue;
    number += i;
}

```

2/5/04

CS360 Client/Server
Programming Using Java

24

Arrays

- ❖ Arrays are declared by:

```
int myArray[] = new int[10];
```

```
int myArray[];  
myArray = new int[10];
```

2/5/04

CS360 Client/Server
Programming Using Java

25

Program

- ❖ Write a program that creates an array of 10 elements. Assign values to the array (just hard code these in for now). Display a histogram of the contents of the array in the following format

Element	Value	Histogram
0	3	***
1	5	*****
2	7	*****
3	1	*
4	3	***
5	8	*****
6	6	*****

2/5/04

CS360 Client/Server
Programming Using Java

26

GUI

- ❖ So far we have learnt how to output information using JOptionPane

- ❖ As you notice, JOptionPane ignores \t

2/5/04

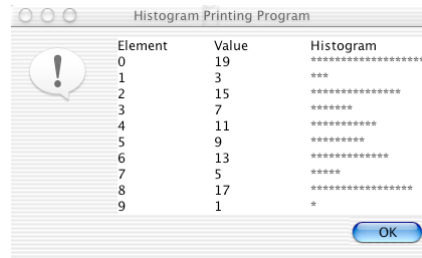

CS360 Client/Server
Programming Using Java

27

GUI

- ❖ A text area is better able to handle text formatting

2/5/04

CS360 Client/Server
Programming Using Java

28

Assignment

- ❖ Knights Tour Assignment
- ❖ Start Early
- ❖ Due on Tuesday, February 17, 2004

2/5/04

CS360 Client/Server
Programming Using Java

29

Summary

- ❖ We have covered:
 - Java Applets
 - JTextArea
 - Selection Structures
 - Repetition Structures
 - Arrays
 - Batch Files
