Let's Examine The Opening Screen

Untitled-1 (XHTML)

Code | Split | Design   Title: Untitled Document

\<body\>   100%   603 x 331   1K / 1 sec
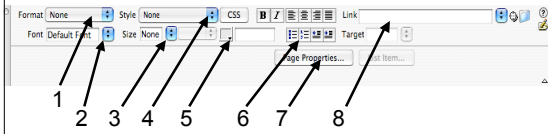

Selection Properties

1 Text formatting (heading, preformatted, ..)
2 Changes the font
3 Changes the size of the font
4 As you add colors, fonts, the styles show up here
5 Changes the color of the text
6 List types (ordered, unordered, indent, outdent)
7 Page properties provide for setting characteristics about an entire Web page
8 Link URL for selected text in a Web page

Dreamweaver Problem #1

• Let's begin using Dreamweaver by doing something we are familiar with which is to create the HTML INFORMATION, HTML TERMS, and HTML TAGS Web pages.

1. Create a folder on your sites folder on Euler called dw1html (for dreamweaver html)

2. Inside the folder, create htmlinfo.html, htmlterms.html, and htmltags.html from scratch using Dreamweaver 8
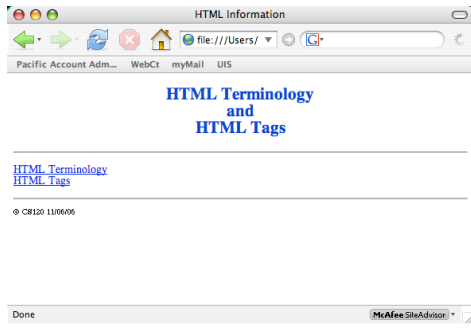

Dreamweaver Problem #1

• Htmlinfo should contain:
   o A heading, centered at the top, in blue, that contains "HTML Terminology and HTML Tags"
   o A horizontal line
   o A link "HTML Terminology" that will open the htmlterms.html page
   o A link "HTML Tags" that will open the htmltags.html page
   o A horizontal line
   o A copyright at the bottom
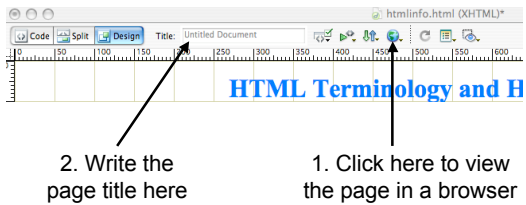

Dreamweaver HTML Info

Questions?

- How do you insert the horizontal rule?

- How do you center the text?

- How do you make the links?
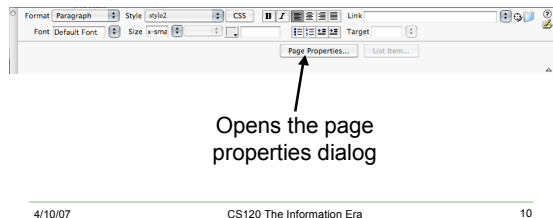

- How do you change the color of the text?

More HTML

1. How can you view your web pages now that you have created them?
2. How can you change the title of a page?

2. Write the page title here
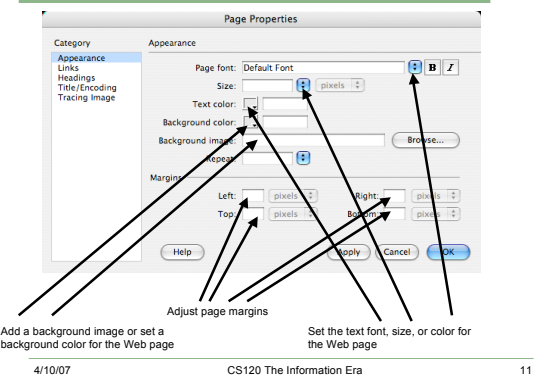

1. Click here to view the page in a browser

More HTML

- How can you change the background color or add a background image to your page?
- You can do this and many other things by going to the page properties

Opens the page
properties dialog

Page Properties

Adjust page margins

Add a background image or set a
background color for the Web page

Set the text font, size, or color for
the Web page

Dreamweaver Problem #2

- Modify the files you created in problem #1 to:
  - Display a background image. The image is strip1.jpg, which you can find in the CS120 folder on Euler
- Create navigation links and modify your pages to look like the one on the following page
- Test your pages by viewing them in the browser

Dreamweaver HTML Info
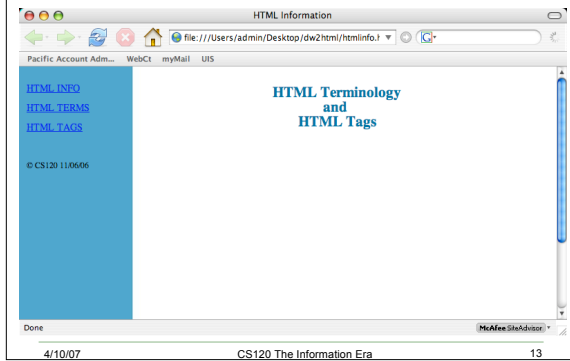

Dreamweaver Problem #3

- Challenge:
  - Using only Dreamweaver 8, create the page on the next slide without using any graphics for a background.
  - Create this single Web page and not the other two Web pages.

- Save this in a folder called dw3html.
