
Loops

Section 5.2 - 5.5
Page 255

9/29/06 CS150 Introduction to Computer Science 1 1

Loop!

- So far, we can
 - Get input
 - Produce output
 - Calculate
 - Conditionally execute statements
- Loops
 - Perform the same bit of code many times

```
statement1;  
statement2;  
...  
statement3;
```

- Why might we want to do this?

9/29/06 CS150 Introduction to Computer Science 1 2

An Example of Repetition

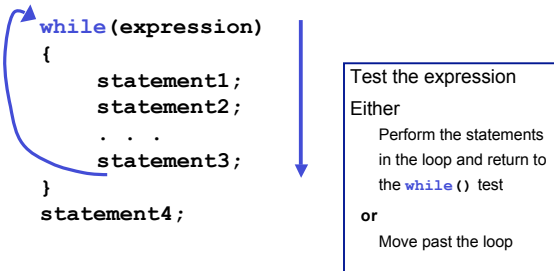

- An example of where we might need to use repetition is if we are calculating the average grade of a class of students
- We would need to continue reading in student grades until we have covered all students
- In pseudocode this might be:

```
While there are more students in the class  
  Ask for student grade
```

9/29/06 CS150 Introduction to Computer Science 1 3

While Loop

- **while** the **expression** is **true**, loop!

9/29/06

CS150 Introduction to Computer Science 1

4

13.1 Example: What happens?

```
int number = 0;

while(number < 5)
{
    cout << "Number : " ;
    cout << number << endl;
    cout << "Please enter a number :
";
    cin >> number;
}
cout << "The final number is: ";
cout << number << endl;
```

9/29/06

5

13.2 Example: What happens?

```
int number = 0;

while(number < 5 && number != 3)
{
    cout << "Number : " ;
    cout << number << endl;
    cout << "Please enter a number :
";
    cin >> number;
}
cout << "The final number is: ";
cout << number << endl;
```

CS150 Introduction to Computer Science 1

6

13.3 Counters (5.3)

- Counter: A variable that is incremented or decremented each time a loop runs

```
int theCounter = 0;    // initialize the counter
while(theCounter < 2) // test the counter
{
    cout << "theCounter : " ;
    cout << theCounter << endl;
    theCounter += 1;    // increment the counter
}
```

- What will happen?

9/29/06

CS150 Introduction to Computer Science 1

7

13.4 Key Ingredients of **while** loops

- Initialize
MUST initialize the counter
- Test
The value of the counter is tested before each iteration
- Update (Increment/Decrement)
The counter is changed during each loop iteration

If any one of these is missing or incorrect, your loop won't run properly--not at all, too many/few times or infinitely.

9/29/06

CS150 Introduction to Computer Science 1

8

13.5 Counters

```
//notice theCounter is now initialized to 1
int theCounter = 1;    // initialize the counter
while( theCounter < 2 ) // test the counter
{
    cout << "theCounter : " ;
    cout << theCounter << endl;
    theCounter += 1;    // increment the counter
}
```

- What will happen?

9/29/06

CS150 Introduction to Computer Science 1

9

13.6 Counters

```
int theCounter = 0;    // initialize the counter
while( theCounter < 2 ) // test the counter
{
  theCounter += 1;    // increment the counter
  cout << "theCounter : " ;
  cout << theCounter << endl;
}
```

- What will happen?

9/29/06

CS150 Introduction to Computer Science 1

10

13.7 Counters

```
int theCounter = 0;    // initialize the counter
while( theCounter > 2 ) // test the counter
{
  cout << "theCounter : " ;
  cout << theCounter << endl;
  theCounter += 1;    // increment the counter
}
```

- What will happen?

9/29/06

CS150 Introduction to Computer Science 1

11

13.8 Practice

- Write a snippet of code that will print all the numbers from 0 to 10000

9/29/06

CS150 Introduction to Computer Science 1

12

13.9 Let the user control the Loop (5.4)

- Let the user determine how many times to run the loop

```
int theCounter = 0;           // initialize the counter
int maxValue;

cout << "How many times should we run the loop? ";
cin >> maxValue;

while(                        ) // test the counter
{
    cout << "theCounter : " ;
    cout << theCounter << endl;
    // increment the counter
}
```

13.10 Practice

- Write a snippet of code that will ask the user for a number. Print the numbers from 0 to the square of the number the user supplied.
