

[SCREEN #2]

=== YEAR: 2007 ===

```

                JANUARY
Su Mo Tu We Th Fr Sa
    1  2  3  4  5  6
  7  8  9 10 11 12 13
14 15 16 17 18 19 20
21 22 23 24 25 26 27
28 29 30 31
```

[SCREEN #3]

=== YEAR: 2007 ===

```

                FEBRUARY
Su Mo Tu We Th Fr Sa
    1  2  3
  4  5  6  7  8  9 10
11 12 13 14 15 16 17
18 19 20 21 22 23 24
25 26 27 28
```

[AND SO ON UNTIL DECEMBER]

## Notes

- You will need to take into consideration whether the year entered is a leap year. As you recall, a year is a leap year if it is divisible by 4, unless it is a century year where it is a leap year only if it is divisible by 400.
- To calculate the day on which a particular date falls, the following algorithm may be used:

$$\begin{aligned} a &= (14 - \text{month}) / 12 \\ y &= \text{year} - a \\ m &= \text{month} + 12*a - 2 \\ d &= (\text{day} + y + y/4 - y/100 + y/400 + (31*m)/12) \% 7 \end{aligned}$$

Where *year* is the four-digit year, *month* is the integer between 1 and 12 representing the month, *day* is the day of the month, and *d* is the day of the week. The value for *d* is 0 for Sunday, 1 for Monday, 2 for Tuesday, etc.

Taking March 15, 2007 as an example; **month** = 3, **day** = 15, **year** = 2007. The result of the above calculations is; **d** = 4, which means that March 15, 2007 falls on a Thursday.

### ***To complete this assignment you must***

1. Create a new C++ project in Visual Studio. Name your project "04Calendarxxxxxxx", where xxxxxxxx should be replaced by your PU Net Id. As an example, my project would be called "04Calendarkhoj0332". It is vital that you name your project correctly!
2. Type the solution (fully documented/commented) to the problem into your project.
3. Make sure that your program compiles and runs correctly. If you get any errors, double check that you typed everything correctly. Be aware that C++ is case-sensitive.
4. Once you are sure that the program works correctly it is time to submit your program. You do this by logging on to Turing and placing your complete project folder in the CS150-01 drop folder. Make sure that you copy your program folder and don't move it. If you move it, then you will not have your own copy!

### ***Submit an electronic copy of your design document***

Before you start you need to think about the data in your program and the calculations you will need to perform. Answer the following questions in a GoogleDoc (named 04ProgramDesignPUNetID) and share it with the instructor ([ShereenKhoja@gmail.com](mailto:ShereenKhoja@gmail.com)). Be sure to answer the questions in complete sentences where appropriate. This design document is due on **Friday at 1pm**.

#### **Design Questions:**

1. What data will you need to store for this program, and what are their data types?
2. What operations will need to be protected by if statements?
3. How many loops will you need for your program?
4. What will your program need to do in a loop?
5. What data and conditions will your program use to stop the loop(s)?

#### **Notes**

1. You must follow the coding standards.
2. You must validate the year; it should be greater than zero.
3. You must use constants when possible.
4. Your program will be graded on efficiency. In other words, you will be marked down for repeating code statements unnecessarily.
5. You may only use the C++ programming concepts covered thus far in class. Do not use any more advanced concepts that we have not covered or any other programming concepts that you have had experience with.
6. Your output must look **exactly** like the sample given.
7. You must comment your code appropriately.
8. Refer to the syllabus for what constitutes plagiarism, and the consequences for plagiarizing.

## **Hints**

1. Use **if** statements to figure out how many days there are per month and to display the name of the month.
2. Using **setw** will help you format the output.
3. Check your results against a real calendar!
4. Don't forget to test February for all leap year possibilities.

To receive full credit for this assignment, your project must be in the drop box by 1pm on the day that it is due. Anything later will be considered late. Further, you must bring a color hard copy of your program to class and place it on the instructor's desk by 1pm.

**Good luck! And remember, if you have any problems, come and see me straight away. Also, tutoring hours are Tuesdays and Wednesdays 7-9pm.**

**START EARLY!!**
