

Functions with Reference Arguments

- Write a complete C++ program that reads in the starting and ending time of phone calls and displays them to the screen in a tabular format.
- You must convert the times from 24-hour format to 12 hour format.
- Here is a sample input file:

```
3
15:23 15:25
00:12 00:42
9:54 10:13
```

Functions with Reference Arguments

- Here is the output:

```
*****  
*           Phone call summary           *  
*****  
  
          Start                End  
-----  
      3:23 PM                3:25 PM  
12:12 AM                12:42 AM  
      9:54 AM                10:13 AM
```

Functions

```
void displayTitle(string);
```

```
void displayHeading();
```

```
void getTime(int &, int &, ifstream &);
```

```
void convertTime(int, int, int &, char &);
```

```
void displayTime(int, int, char);
```
