## struct Example

- The following example illustrates structs, arrays of structs, an array within a struct, and nested structures
- The example simulates a Scrabble hand
- In the game of Scrabble, players have a hand of tiles, where each tile has a letter and and an associated score

## The Process

- What structure(s) are we going to need?
- We would also like the following functions:
- A function to read in a hand from the user
- A function to calculate the points in a hand (40 points on the previous slide)
- A function to print out the tiles in a hand
