CS490 Assignment 3

Project Requirements

Date Assigned: Tuesday, September 7, 2004

Date Due:

- Tuesday, September 14, 2004 - draft

- Tuesday, September 21, 2004 - final

Points: 25 points for draft, 35 points for final version

Objectives

List all the user requirements for your project. The user requirements will be in the form of use cases.

The draft of this document should be a complete draft. In other words, it is the best that you can do at this time. Next week we will spend some time in class looking over the requirements and I will provide you with some comments on how you can improve the use cases for the final version.

I have provided a template for this document in the CS490 folder on turing. You can log on to turing using your PU Net Id and your chosen password.

I will place some useful books on use cases on project requirements on the round table in the lab. Feel free to use these when writing your use cases. The books contain some useful examples.

When working on this assignment you should put yourself in the user's shoes. What does the user want to see from your system? What functionality do they expect?

It might to help if you also start thinking about the user interface at this point. You might want to sketch out some UI's that you expect the user to interact with. Every interaction with a component of the UI will then be its own use case.
