

# CS493 Software Engineering I

## Module Implementation

**Date Assigned:** Monday, October 24, 2011

**Total Points:** 25 pts

### **Implementation**

For this assignment, you need to implement the module according to your design. The due date for your implementation is the one that you set in your schedule. If you must change your schedule, you must follow the change guidelines.

To turn in your module, you must have it demonstrated to me and the whole class. In addition, you need to turn in a Google Document to me ([ShereenKhoja@gmail.com](mailto:ShereenKhoja@gmail.com)) on the day of your demo listing the following:

- List any changes you made in your implementation that didn't follow the design: For example, did you add any classes, functions, or data? If so, list them and describe them. Also, describe why these changes were necessary.
- List of any additional tests you've developed since the design phase. List the test, what it's testing for, and the expected results.
