CS 300 In Class Function Pointer Lab

Import the Function Pointer Lab into Eclipse.

File | Import | SVN | Create a new repository location

URL: svn+ssh://zeus.cs.pacificu.edu/home/CS300Public/2011/SVNROOT_CS300_2011

Select project: **CS300FunctionPointerLab**

Team | Disconnect   to disconnect from the public SVN Repository

        SELECT: Also delete the SVN meta information from the file system

Team | Share   to put it in your own SVN Repository

The lab contains two C files, arraysAndFunctionPointers.c and voidStarList.c, a Makefile and a data file, numbers.txt. You must add code in the C files where a **// TODO:** comment exists.

Work on arraysAndFunctionPointers.c first. While you work on arraysAndFunctionPointers.c, remove voidStarList from the TARGETS in the Makefile. Once you start working on voidStarList.c re-add this target.

The comments should be self explanatory.
