What is it?

```
#include <sqlite3.h>

sqlite3 *psDB;
sqlite3_stmt *psStmt;

sqlite3_open_v2(..., &psDB, ...); // open the DB

sqlite3_prepare_v2(..., &psStmt, ...); // build a Query

sqlite3_bind_int(psStmt, ...); // set a parameter

while ( sqlite3_step(psStmt) == SQLITE_ROW ) // retrieve one row
{
    sqlite3_column_int(psStmt, ...); //retrieve one column
    sqlite3_column_text(psStmt, ...); //retrieve one column

    // do something useful
}

sqlite3_finalize(psStmt);
sqlite3_close(psDB);

Classes | [Description](#)

Contains the SQLite database management classes that an application would use to manage its own private database.

|----------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| SQLiteCursorDriver | A driver for SQLiteCursors that is used to create them and gets notified by the cursors it c |
| SQLiteDatabase.CursorFactory | Used to allow returning sub-classes of Cursor when calling query. |
| SQLiteTransactionListener | A listener for transaction events. |

Classes

| | |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| SQLiteClosable | An object create from a SQLiteDatabase that can be closed. |
| SQLiteCursor | A Cursor implementation that exposes results from a query on a SQLiteDatabase . |
| SQLiteDatabase | Exposes methods to manage a SQLite database. |
| SQLiteOpenHelper | A helper class to manage database creation and version management. |
| SQLiteProgram | A base class for compiled SQLite programs. |
