Add a new file named FirstPHP.php from the PHP Template

Get ready to synchronize with Gray

 Window | Preferences | Aptana Studio | Publishing

> Add .project to the list of ignored files (*dot* project) Add queries to the list of ignored files

The first contains your Aptana settings. The second will be a directory to store your .sql files Go to gray and make the directory /space/https/PUNetID/TestPHP

mkdir /space/https/PUNetID/TestPHP

🗘 💿	Deploy My Application	\odot \otimes \otimes
Select a deployment pro Deployment providers allow to a remote server or servic	vider you to easily transfer your files e. Select an option below to get started.	
Select a deployment provid	er:	
type filter text		•3
- 👼 Capistrano		
– Engine Yard		
- (3) FTP/SFTP/FTPS		
Heroku		
FTP, SFTP and FTPS are wid	espread standards for easily uploading y	our
application to a variety of w concerned about security, a	eb hosts. Choose SFTP or FTPS if you are as they offer an encrypted format.	
<u> </u>	<u>Next ></u> <u>Finish</u>	Cancel

Choose FTP/SFTP/FTPS

🔅 💿	Edit Connection		\odot \odot \otimes
Edit the SFTP	connection		FTP
